Collagen & Elastin Solid Beverage/Fruit Flavored Beverage

Brand Concept

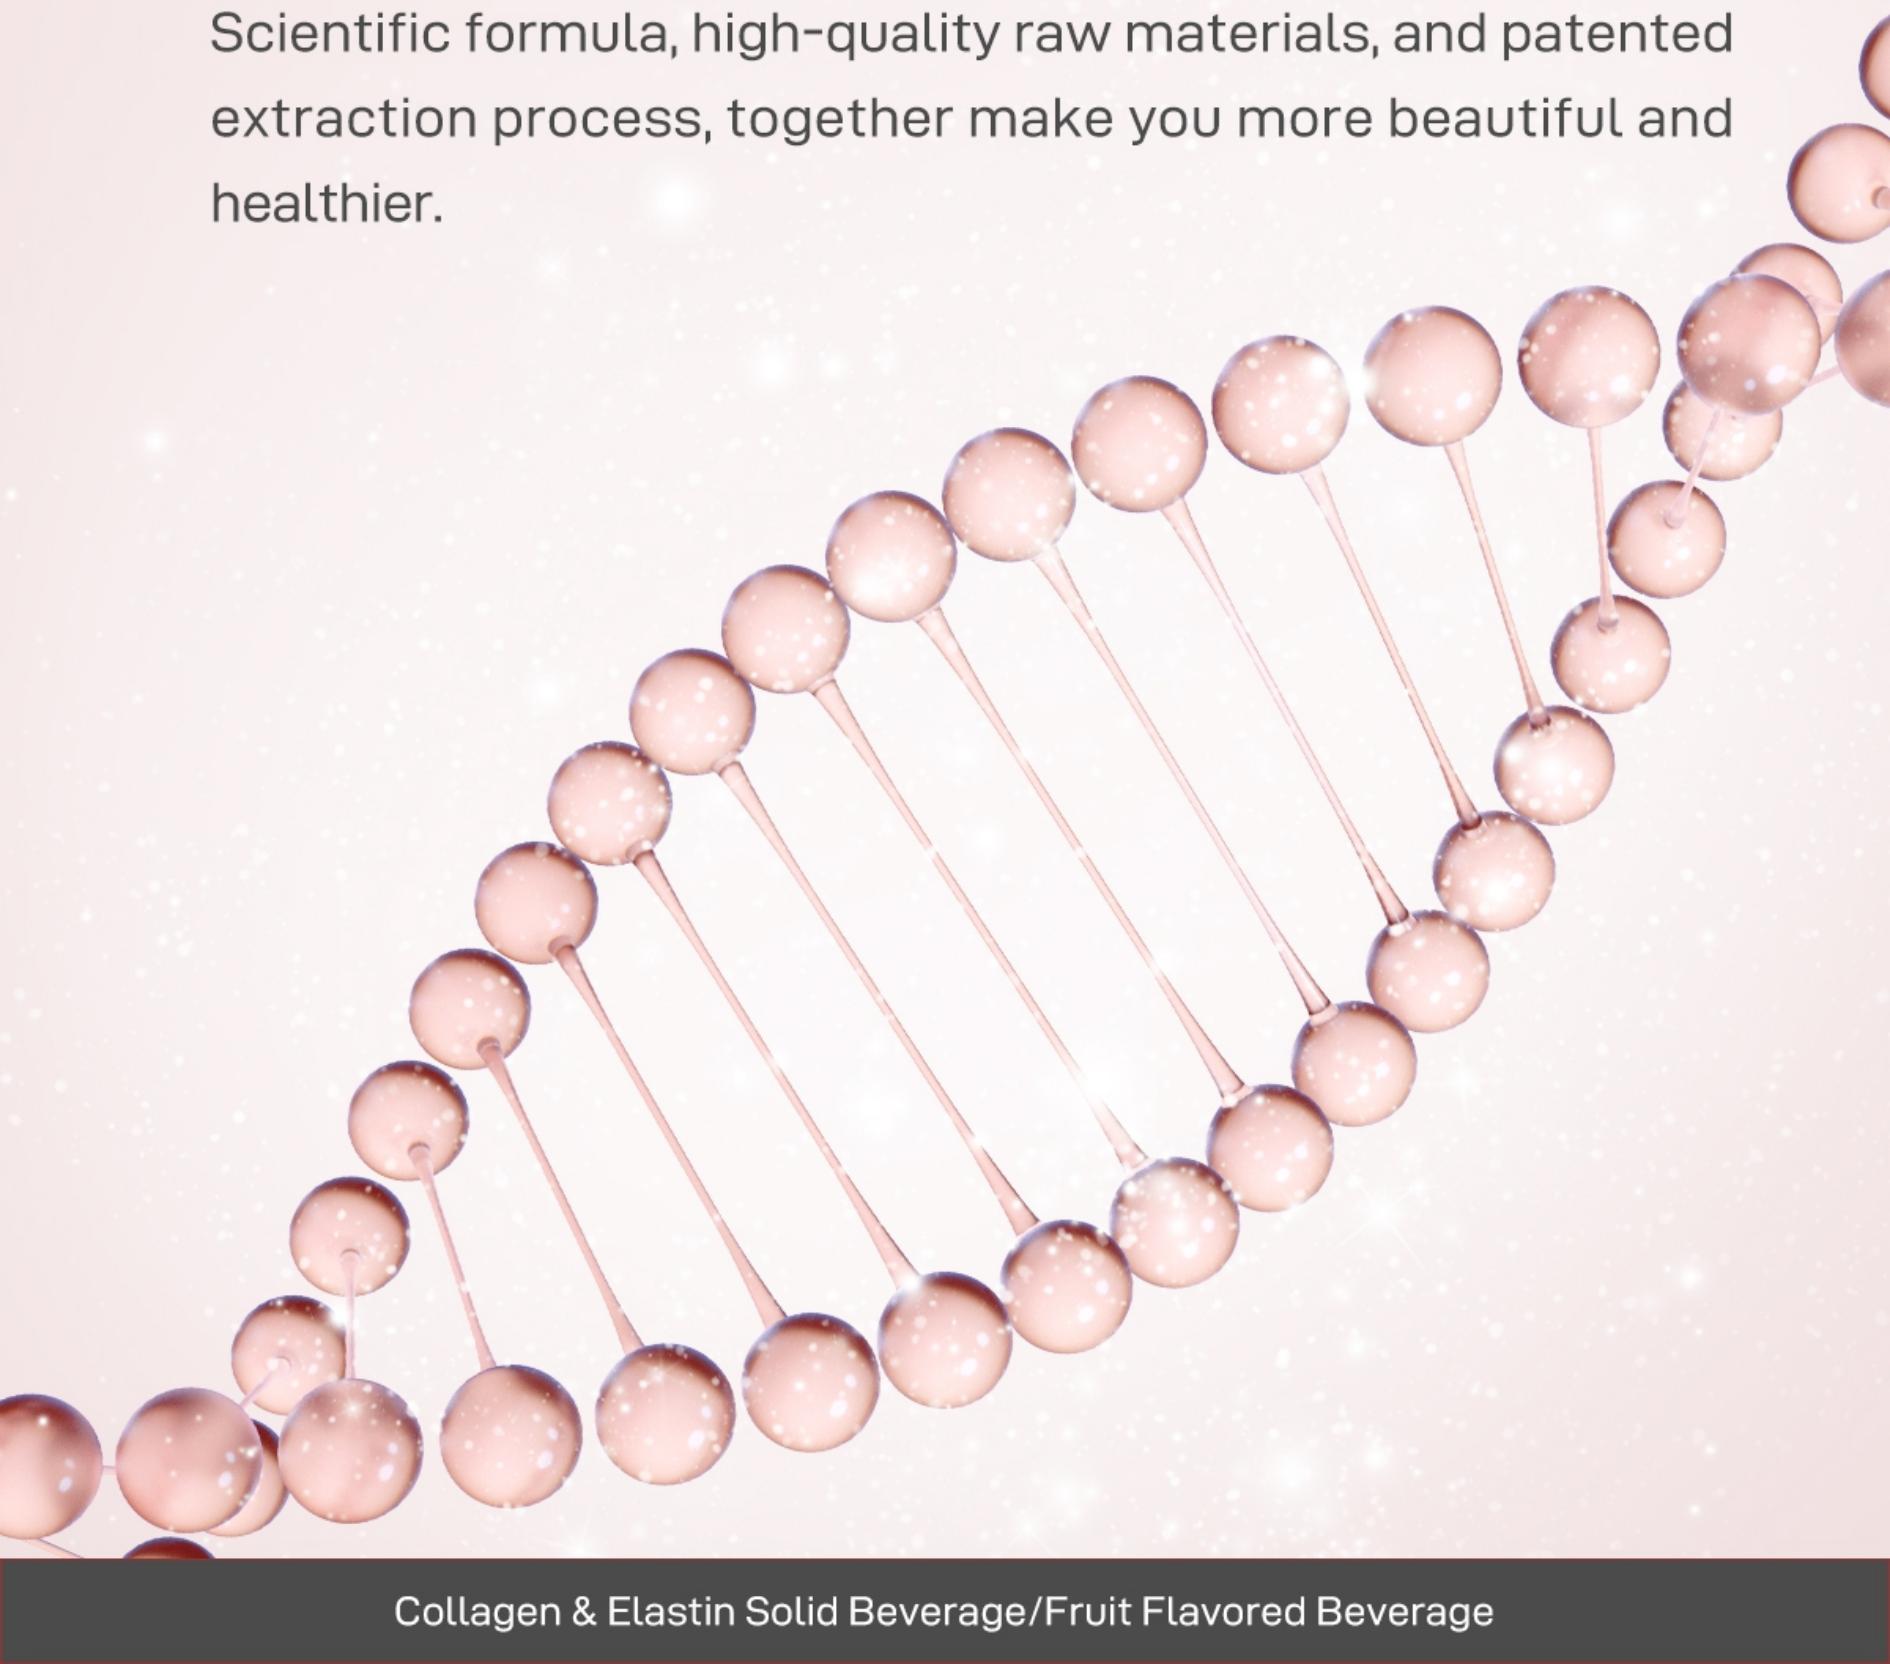

Since the birth of the NUTRITION ESTHETICS brand, with the obsession of "beauty", it has been acting and investing in the field of biotechnology. We highly agree with the development trend in the field of biotechnology, and will continue to develop new foods in the areas of beauty and skin, intestinal ecology, body conditioning, etc., and strive to promote the transformation of cutting-edge technologies in the biological field, and promote the development of the health and beauty industry.

Materials Selection

Nutritional Esthetics focuses on biotechnology research, visits well-known planting bases and raw material producing areas at home and abroad, and selects high-quality food raw materials around the world.

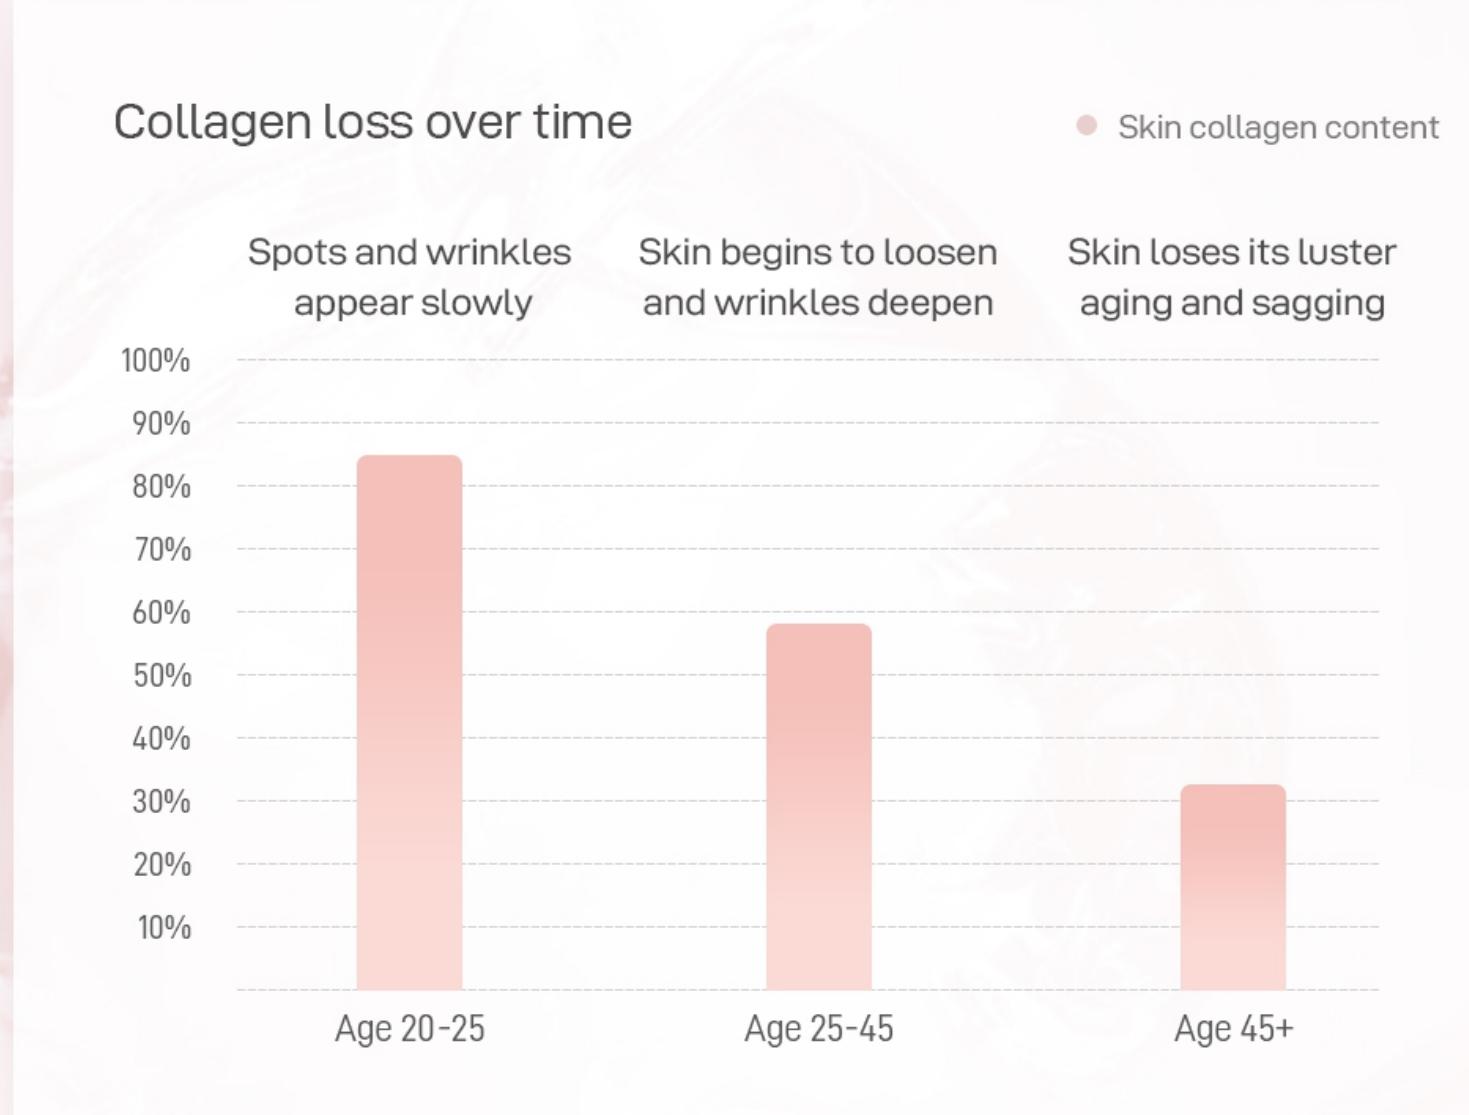

Quality Assurance

Scientific formula, high-quality raw materials, and patented extraction process, together make you more beautiful and healthier.

Why do we need to supplement collagen?

After the age of 25, collagen is lost year by year

In addition to age factors, the intake of high-ages (end-glycation end products) foods, long-term oxidation caused by environmental air and other incentives, unavoidable ultraviolet radiation – also commonly known as saccharification, oxidation, and photoaging, are the three major external factors that cause the skin relaxation. All the factors will destroy the stability of collagen fibers, resulting in decreased synthesis, adhesion and deformation, and eventually skin relaxation and collapse.

The skin also changes as a consequence

Spots & Wrinkles

Skin Relaxation

Aging and Sagging

How to supplement collagen?

Food supplement

Large molecular weight
Limited absorption
Easy to get fat

Make-up products

Stay on the surface of the skin
Impermeable

Cosmetic medicine

Expensive & risky
Irreversible

Food-grade collagen peptide

High absorption rate &
convenient,no risk

Combining the above 4 ways to supplement collagen, food-grade collagen peptide is for sure more suitable. There are plenty of collagen peptide products on the market. Why do so many partners choose Nutrition Esthetics?

Three core patents

SCP super collagen peptide

Advantage

01

The small molecular weight of 1000-3000 Daltons
the most conducive to human body absorption

Advantage

02

"W Clear" two-stage purification process
retaining the active peptide chain PO and OG

Advantage

03

Select the SCP super collagen peptide
Imported from Japan

Advantage

04

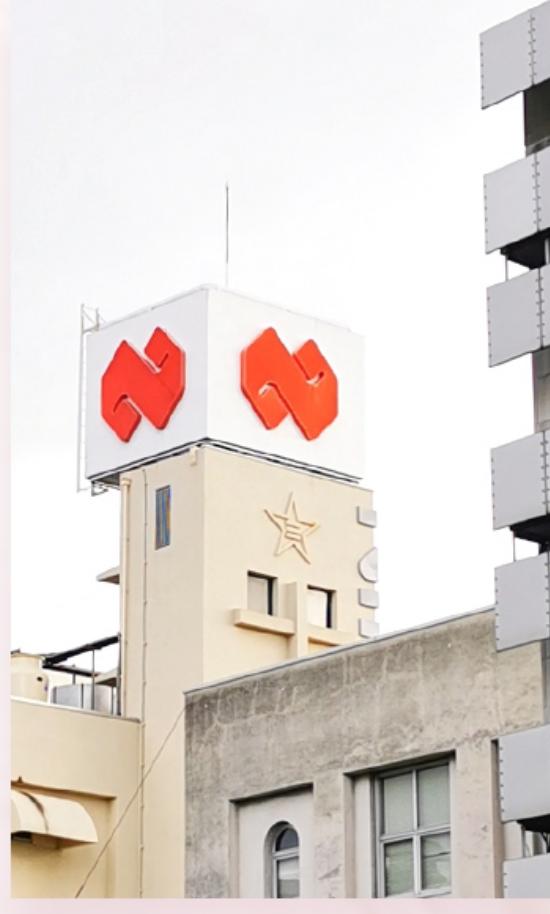

The content of SCP exceeds the recommended
experiment dosage, Super collagen peptide=5000mg

From core strategic partner

Nitta Gelatin Co., Ltd.

The collagen peptides of international brands such as SHISEIDO, FANCL, POLA and so on that we are familiar with all come from Nitta Gelatin.

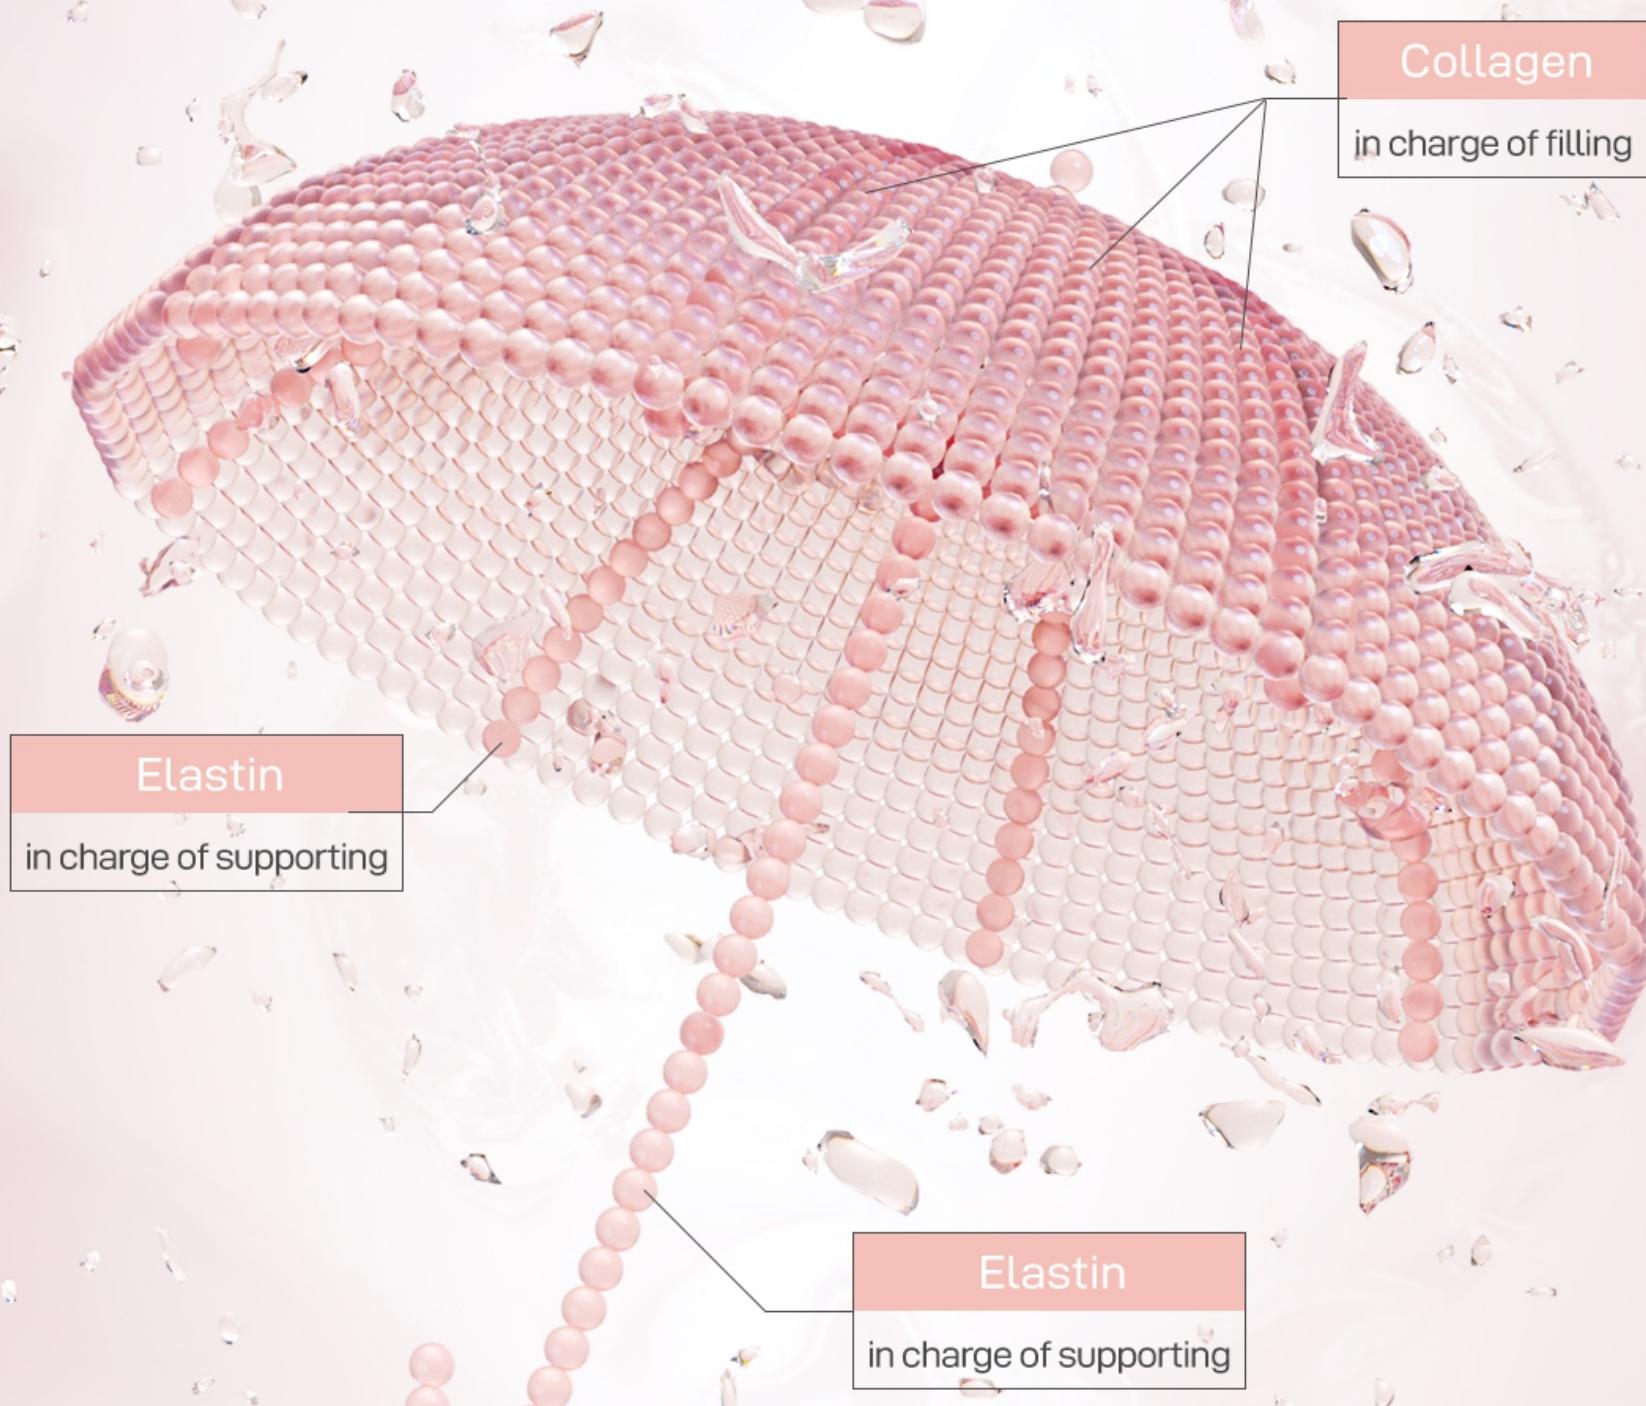

Nutritional Esthetics is the only core strategic partner of Nitta Gelatin, and also the only company in China authorized to use the high-spec raw material SCP of Nitta Gelatin.

Patent No.: CN105188727[A] ; CN104271144[A] ; CN104271144[B] ; CN102177173[A] ; CN102177173[B]

Collagen & Elastin Solid Beverage/Fruit Flavored Beverage

How important is elastin?

Nutritional Esthetics selects high-quality SCP super collagen peptides and elastin peptides.

Collagen and elastin exist in the form of a bundle of collagen fibers and elastic fibers respectively, to maintain the elasticity and tension of the skin together. Without elastin, collagen cannot act independently.

Collagen fiber and elastic fiber can be said to be the relationship between the umbrella frame and the umbrella bone. Collagen is responsible for filling and elastin is responsible for support. Both are indispensable, and only double peptides can really help keep a youthful air.

Precious bonito elastin peptide

Bonito elastin peptides imported from Japan are extracted from bonito heart arterial bulbs. Each bonito has only a very small heart arterial bulb, and the available raw materials are extremely precious. In addition, the extraction process is complicated and the cost is high, which make it a "noble-lady" food raw material.

Bonito elastin peptide extraction process is complicated

Three core patents

Bonito Elastin peptide

Advantage
01

The elastin in the heart arterial bulb of bonito is quite high-quality. It is a nationally recognized elastin food material

Advantage
02

The extraction process is complex and the cost is high. It is a "noble-lady" food material

Advantage
03

The content of elastin peptides are more than the effective dosage
Originator level elastin peptide > 75mg

From core strategic partner

**Hayashikane Sangyo
Co., Ltd.**

The elastin peptide of beauty drinks from SHISEIDO, the elastin peptide capsules from DHC and so on that we are familiar with all come from Hayashikane Sangyo.

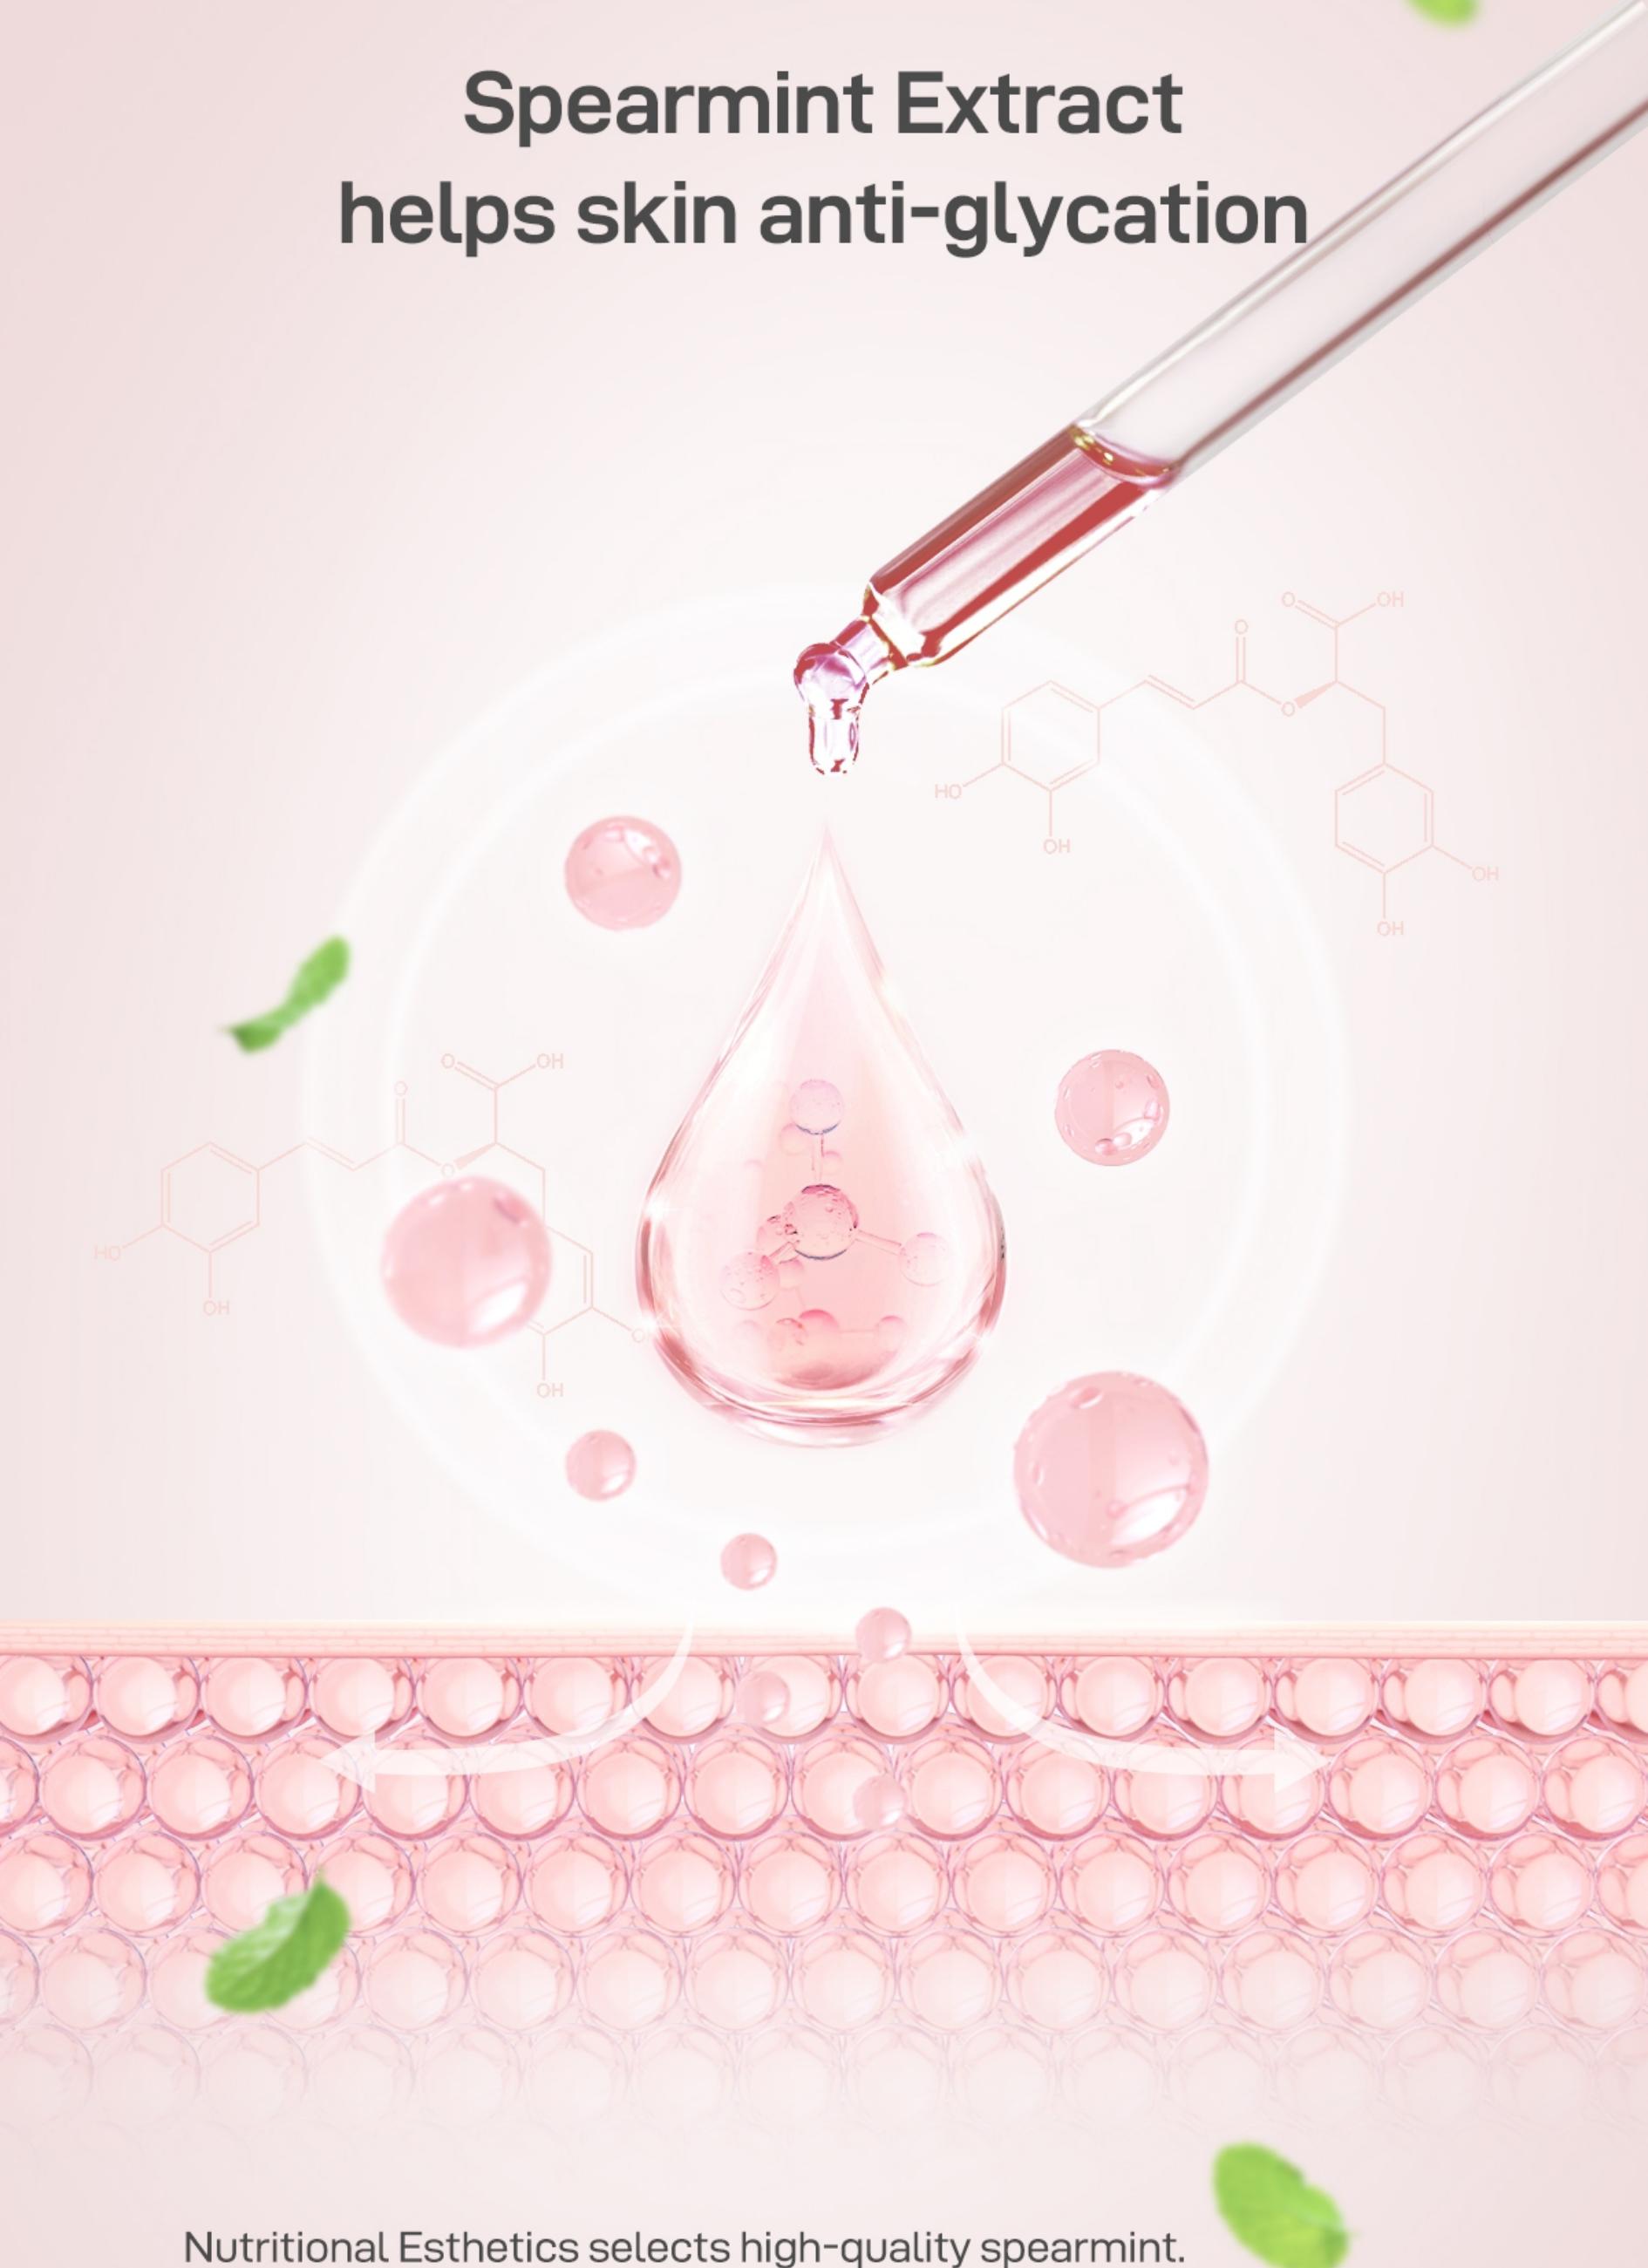

Bonito elastin peptide has its own patent*, extracted from the bonito heart arterial bulb, and retains the iconic amino acids of elastin - catenin and isocatenin.

Japanese invention patent No.: JP5590704

Collagen & Elastin Solid Beverage/Fruit Flavored Beverage

Spearmint Extract helps skin anti-glycation

Nutritional Esthetics selects high-quality spearmint.

Rosmarinic acid, an extract of spearmint, can effectively inhibit the AGEs produced by glycosylation and achieve the purpose of anti-glycation.

The biggest harm of saccharification to the skin is to cause collagen degeneration. We need to not only supplement collagen, but also protect collagen.

Three core patents

Spearmint Extract

Advantage

01

Patented high-quality spearmint series. Have 5 to 14 times the rosmarinic acid content of other varieties

Advantage

02

Use water extraction technology
Guarantee its rosmarinic acid content

Advantage

03

Use patented drying technology
Fully preserve the active ingredients of polyphenols

From

U.S. Kemin Group

The spearmint extract is selected from the Neumentix natural spearmint compound polyphenols supplied by the Kemin Group.

Founded in the United States in 1961, Kemin Group is a famous raw material producer with key technologies.

U.S. Patent No.; 13/367888 ; 13/367863 ; 13/104499

Collagen & Elastin Solid Beverage/Fruit Flavored Beverage

Powful Functions

Repair skin

Balance water & oil

Nourish skin

Moisturizing
&
firming

Whitening
&
spot-fading

Anti-glycation
&
brightening

Collagen & Elastin Beverage Two Forms

Solid Beverage

Make the beverage as you wish

Product Name:

Collagen and Elastin Solid Beverage

Product specification:

6.8g x 10 packets

Shelf life:

24 months

Recommended dosage:

1-2 times daily and 1 packet each time

Liquid Beverage

Ready to drink

Product Name:

Collagen and Elastin Fruit Flavored Beverage

Product specification:

30ml x 10 packets

Shelf life:

12 months

Recommended dosage:

1-2 times daily and 1 packet each time
